

Mini Assignment Written Plan

Matthew Tenua

In the end, I need a database with mini info, then php converting it to json, and finally using vue display the info on the page in a lightbox. I will also have to style the whole site to feel like the mini cooper brand feel (colours, looks, etc..)

I will first start with the wireframes, and design roughly how I want it to look. Then, I will put down the base html to block out where everything will go, along with some simple styling. Next, I will create my mini database and convert my php files over to this assignment so they function properly. This will be followed by getting my lightbox working, and having info displayed all in it. Finally, it will all be styled.

Here is the checklist:

1. Create Wireframes
2. Base HTML and CSS/SASS
3. Create Database
4. Convert PHP
5. Get Lightbox Working
6. Get Info Displaying Inside Lightbox
7. Style Everything

At the end I am hoping to have a nice, proper, Mini Cooper site that shows off all 6 types of Mini's.
